DETAILED ACTION

Reissue Applications

1. The preliminary amendment filed July 17, 2003 has been entered and fully considered.
2. Mr. Meikle confirmed the cancellation of claim 7 on September 24, 2004.
3. The reissue oath/declaration filed with this application is defective (see 37 CFR 1.175 and MPEP § 1414) because of the following:
 - a. The formula Applicant is attempting to amend does not match the original formula, formula (III) of column 5, lines 1-9 and column 39, lines 18-26.
 - b. Additionally, the format used to make the amendment is improper. 37 CFR 1.173 (i)(d): *Changes shown by markings*. Any changes relative to the patent being reissued which are made to the specification, including the claims, upon filing, or by an amendment paper in the reissue application, must include the following markings:
 - (1) The matter to be omitted by reissue must be enclosed in brackets; and
 - (2) The matter to be added by reissue must be underlined, except for amendments submitted on compact discs (§ § 1.96 and 1.821(c)). Matter added by reissue on compact discs must be preceded with “ <U > ” and end with “ < /U > ” to properly identify the material being added.
4. Claims 1-6, 8-9 and 10 are rejected as being based upon a defective reissue oath under 35 U.S.C. 251 as set forth above. See 37 CFR 1.175.

The nature of the defect(s) in the oath is set forth in the discussion above in this Office action.

Claim Rejections - 35 USC § 251

5. Claims 1-6, 8-9 and 10 are rejected under 35 U.S.C. 251 as being based upon new matter added to the patent for which reissue is sought. The added material, which is not supported by the prior patent, is as follows:

Formula (III) at column 5, lines 1-9 and

Formula (III) at column 39, lines 18-26.

Claim Rejections - 35 USC § 112

6. Claims 1-6, 8-9 and 10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The polymethine compound of claim 1 is produced via a condensation reaction using the diformyl compound represented by formula (III) as presented in the specification at column 5, lines 1-9 and column 39, lines 18-26. However, formula (III), as amended, introduces new matter.
